

Cine Flow OS

A Edition Studio Management Software

A Client Guide

PURPOSE

Client showcase & product onboarding

LIVE PRODUCT

[Open CineFlow OS](#)

CineFlow OS connects sales, clients, project delivery, editors, finance and business reporting in one operations hub.

Command Center: live production, deadlines, sales pipeline and realized revenue.

01 • LEAD TO CLIENT

Capture demand and convert it into work

The Sales Leads pipeline tracks deal stage, value, source, priority and follow-up. Once qualified, the relationship moves into the Client CRM, where currency, payment mode, portal access and revenue history are managed.

Sales Leads board and follow-up pipeline.

Client CRM with currency and portal controls.

1. **Create the lead** - record the inquiry, company, source, expected value and next follow-up.
2. **Progress the deal** - move it through Contacted, Qualified, Proposal Sent and Negotiation.
3. **Convert the client** - create the client account when the deal is approved.
4. **Configure access** - set currency, payment mode and share the client portal only with the intended contact.

RESULT Commercial context is established before production begins.

02 • PRODUCTION DELIVERY

Run every project through a visible workflow

The Projects Database supports board, table, all-project and Gantt views. Opening a project reveals its working hub: overview, production, assignments, reviews, files, finance and activity history.

Projects grouped by production status.

Project Hub with scope, priority, editor and deadline.

1. **Create or approve scope** - add the project directly or review raw-footage submissions in the queue.
2. **Set delivery controls** - define status, priority, deadline, budget, platform, aspect ratio and revision allowance.
3. **Assign production** - connect the lead editor and any supporting contributors.
4. **Move through stages** - Not Started → Cuts & Assembly → grading/subtitles/MGFX/sound → Review & Feedback → Delivered.
5. **Close the loop** - retain files, reviews, financial splits and the activity log inside the project hub.

CLIENT DEMO TIP Open a project card after showing the board; the drawer demonstrates that operational detail is connected to the high-level pipeline.

03 • TEAM, FINANCE & REPORTING

Connect delivery ownership to studio economics

Editor workspaces provide isolated views for assigned work. Studio Finance then consolidates verified receipts, payouts, partner shares and expenses; Business Analytics turns those records into operational and tax-ready reporting.

Secure editor workspace launch and link controls.

Net operating result and payout/expense breakdown.

Business Analytics: FY revenue, verified payments, international receipts and project economics.

1. **Assign the editor** - use Editor CRM and Workspaces to manage specialism, workload and portal access.
2. **Invoice and verify** - track invoices, incoming payments and actual credited amounts.
3. **Allocate costs** - record revenue splits, staff payouts and studio expenses.
4. **Review performance** - monitor retained profit, margin, realized revenue and project-level economics.
